Right-of-Way Acquisition and Relocation Including 50% contingency	\$31M ⁴	\$36M ⁴	\$41M ⁴
Project Cost	\$56	\$72	\$93

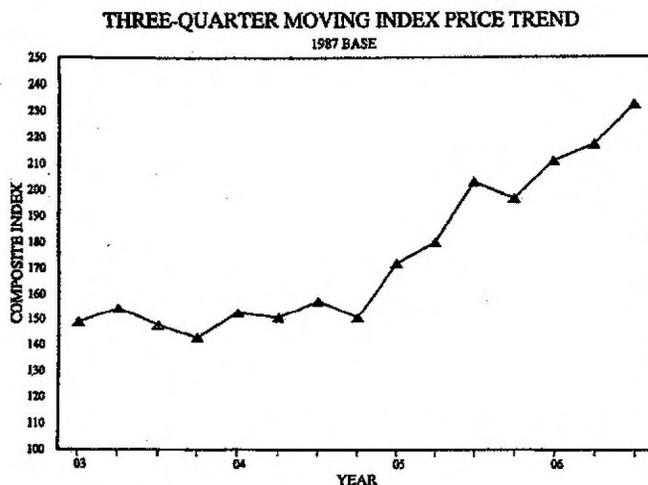

Notes:

1. Estimated costs are in addition to the Aolele Option.
2. Price Trends for Federal-Aid Highway Construction records ratio of urban prices to rural prices between 2000 and 2006 vary between 1.18 and 1.40.
3. Average guideway and sitework construction cost (SCC Item 10 + 40) per rf for HHCTCP in FY2009\$.
4. Includes \$2M acquisition cost of State-owned parcels makai of Ualena St.

PRICE TRENDS for FEDERAL-AID HIGHWAY CONSTRUCTION

1987 BASE

FOURTH QUARTER 2006

The three-quarter moving composite price index is the weighted average of the indices for three consecutive quarters.

The Composite Bid Price Index is composed of six indicator items: common excavation, to indicate the price trend for all roadway excavation; portland cement concrete pavement and bituminous concrete pavement, to indicate the price trend for all surfacing types; and reinforcing steel, structural steel, and structural concrete, to indicate the price trend for structures. Descriptions of the six indicator items can be found in Federal-aid Policy Guide G-6011-10.

Development of the index is discussed in some detail in PUBLIC ROADS magazines, volume 31, No. 10, October 1961; volume 36, No. 4, October 1970; and volume 45, No. 1, June 1981.

Average contract prices shown herein are based on actual bids and include costs of materials, labor, equipment, overhead and profit.

Disclaimer: The base for each State index is its own particular "market basket" of quantities and costs during the base period. The composite index for each State measures the change in that State's index since base year 1987. (In 1987 each State's index equaled 100). **These indices are not to be used for State comparisons.**

FHWA guidance calls for data to be provided on all National Highway System projects except those projects with a contract value less than \$500,000, or installation of protective devices at railroad grade crossings, or beautification projects. Despite this requirement, FHWA may not receive all data required to be submitted in any year and, in some cases, no data is received from a state for an entire year. In addition, when data are not received in time to be included in the composite price trend for the quarter or year, FHWA routinely includes these data in the subsequent period's reporting. Finally, FHWA performs limited review of data for accuracy and does not verify data entry by its staff. FHWA has not assessed the degree to which these conditions affect reported price trends, although it believes that underreporting is the most material limitation in the quality of the reported data.

¹ Base for composite index, 1987, involves 210,078,000 cubic yards of roadway excavation, 30,893,690 square yards of portland cement concrete surfacing with an average thickness of 9 inches, 37,760,443 tons of bituminous concrete surfacing, 577,753,544 pounds of reinforcing steel for structures, 444,924,141 pounds of structural steel and 3,498,333 cubic yards of structural concrete.

² Starting with 1972, prices for portland cement concrete surfacing reflect adjustments to a standard 9" thickness in each State. Prices do not include costs for reinforcing steel and joints.

1.18-1402

June 9, 2006

Mr. Francis Hirakami
MK Engineers
286 Kalihi Street
Honolulu, Hawaii 96819-3937

Dear Mr. Hirakami:

**Re: Honolulu High-Capacity Transit Alternatives Analysis
HECO Work Order No: EE000063**

This is in response to our meeting on February 26, 2006 regarding the subject project. As requested, the following are rough unit costs which may be used for estimating purposes.

12kV OH to OH Relocations (wood to wood):

- a. 12kV 3Ph with secondary OH lines
(rural area, single circuit and new conductors with 250ft avg. spans): **\$720,000/mi**
- b. 12kV 3Ph with secondary OH lines
(urban area, single circuit and new conductors with 150ft avg. spans): **\$1,009,000/mi**
- c. 12kV 1Ph with secondary OH lines
(single circuit and new conductors with 150ft avg. spans): **\$725,000/mi**

*Note: Unit costs for OH to OH relocations include removal of existing OH facilities, and do not include switches and transformers.

12kV OH to UG Relocations:

- a. 12kV UG (single 3Ph circuit): **\$5,000,000/mi**
- b. 12kV UG (additional 3Ph circuit installed at same time as single 3Ph circuit): **\$933,000/mi**
- c. 12kV UG (1Ph circuit): **\$3,823,000/mi**
- d. 12kV UG Main Run Serving Loads (dual 3Ph mains,
dual 3Ph fused feeders, and three 1Ph fused feeders): **\$7,238,000/mi**

*Note: Unit costs for OH to UG relocations include removal of existing OH facilities, and do not include riser poles, transformers, and switchgears.

12kV UG to UG Relocations:

- a. 12kV UG (single 3Ph circuit): **\$6,253,000/mi**
- b. 12kV UG (additional 3Ph circuit installed at same time as single 3Ph circuit): **\$1,215,000/mi**
- c. 12kV UG (1Ph circuit): **\$5,091,000/mi**
- d. 12kV UG Main Run Serving Loads (dual 3Ph mains,
dual 3Ph fused feeders, and three 1Ph fused feeders): **\$9,902,000/mi**

*Note: Unit costs for UG to UG relocations include removal of existing UG facilities, and do not include transformers and switchgears.
